counterstrikestremev8downloadQ: How to read a csv file and append in an sqlite3 database? I am creating a poker app for android and was wondering if anybody could help me in creating a function that reads a csv file. The csv file is basically for the user to fill in the avatar which I want to be saved in an sqlite3 database. The file is very big so is there any way to limit the size of the file that is read and not split it into pieces? A: You can either read the entire file into a string, then convert it to a string array (list) with a delimiter, then parse the string array to create a list of objects (you could use a generic List as a base class and StringTokenizer or one of its derivations to parse the data into that list). Or you could read a chunk of the file into a string, then parse that. In both cases, you'll have to read the string, split it into list, then parse each entry in that list. Since parsing CSV data is a fairly common problem, I'd recommend the first approach; you'll have better performance, and I have used the approach you described before without issues.

Intravenous immunoglobulin in treatment of corticosteroid-resistant lupus nephritis. Intravenous immunoglobulin (IVIg) has been used in the treatment of autoimmune diseases, mainly systemic lupus erythematosus. To analyse the benefits of IVIg in the treatment of lupus nephritis. Sixty-seven patients (31 men and 36 women; mean age 41.9 +/- 13.7 years) with biopsy-proven lupus nephritis were treated with high-dose IVIg for at least 1 year. The patients were divided into two groups: group I, 31 patients with severe lupus nephritis (n = 9, remission (51.7%), partial remission (25.8%) and response (22.6%); group II, 36 patients with mild lupus nephritis (n = 18,
