- Funky Visual Phonics, Pair Vocabulary with Images.Q: Android - AsyncTask and backgroundTask, when to use?
AsyncTask and backgroundTask are both executing methods in the background. But, what should you use when? In my
code, I'm starting AsyncTask, and I don't know when I should be using it. I'm also creating AsyncTask in onCreate of
Activity new AsyncTask() { @Override protected void doInBackground(Void... params) { // do something return null; }
@Override protected void onPostExecute(Void result) { // results of the AsyncTask } }.execute(); Should I be using
AsyncTask only when I have a process that takes longer than a few minutes? And then not use it anymore and just wait
for result? Or should I use it in backgroundTask as well?

However, attempts at implementing UV light with mercury-vapor lamps have been difficult. More recently, flashlamp-pumped Mercury-Ion UV lamps have been demonstrated. Most of the previous studies of the conversion of electrical energy to UV have been based on the use of arrays of glow discharge tubes, usually four tubes, each typically having a diameter of approximately 1" (i.e. 25 mm). While these arrays provide good UV output, their use is limited due to the space requirements, i.e. 6d1f23a050
